

FACTS & FIGURES

Sustainability at the NBC Conference Centre

In this infographic you can see all the facts and figures that we at NBC handle to do sustainable business practices.

SEPARATING WASTE

At NBC we do everything to separate our waste. Our latest acquisition to separate waste are eight big pet bottle recycle bins. With these recycle bins we collect pet bottles separate for recycling.

RECYCLED COFFEE CUPS

Did you know that we pour about 700.000 cups of Nespresso coffee a year? That's why we use coffee cups made from recycled cardboard.

SOLAR PANELS

The roofs of our new development projects will be provided with solar panels. With the 62 solar panels which have been placed at Green Village in the spring of 2018, we create a CO₂-reduction from approximately 161,8 ton a year. According to the CO₂-calculator you can fly 1.132 times from Amsterdam to Paris with this.

PUBLIC TRANSPORT

We stimulate our guests to travel with the public transport to the NBC congress center. From Utrecht Central Station the guests are in thirteen minutes at the NBC with the express tram.

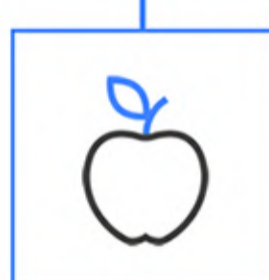

ORGANIC AND FAIR TRADE

Our kitchen team always put together a seasonal culinary offer. That's not only tasty, but also less of a burden for the environment. Also our kitchen mostly works with organic and fair trade products and our meat, fish and vegetables are always provided with a hallmark.

LED LIGHTS

In both event halls of the NBC congress center and in all the halls of the Green Village we use sustainable led lights. Also in the rest of the NBC the lights are increasingly being replaced by led lights.

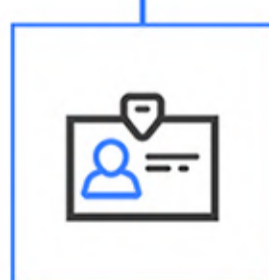

NO WASTE POLICY

We have a no waste policy to prevent food waste. We notice that no shows at events the most food waste create. That's why it's really important to make the signing-up, but mostly the signing-out for guests really easy. To show you the importance of this we made a special video about it.

Watch the video about food waste on your event and how you can prevent it...

FROM REGISTRATION BADGE TO ASPHALT

A registration badge which gets a second life as asphalt? At NBC it's possible. We work together with a partner concerning visitors registration and they use recyclable badges. They can then be reused in for example asphalt.

But on top of that we also do...

All our intern means of transportation are fully electric.

A paperless office: everything is being digitalized.

Smart energy consumption and monitoring based on used places.

A local hiring policy, so the traveling time of our colleagues will be minimal.

WANT TO EXPERIENCE THE SUSTAINABILITY AT THE NBC CONFERENCE CENTRE YOURSELF?

We love to show you our options.
